MTB CONFIGURATIONS

» INTRODUCTION

» HOW TO ATTACH YOUR FXCHIP BLE TRANSPONDER ?

• The FxChip BLE must be **attached to the bike using the velcro tape**.
• It must be attached **on the fork of the bike, positioned horizontally, facing outwards**.

• ⚠️ **Attaching the transponder to any other location or position may result in inaccuracies or non-detection**

• *The FxChip BLE is an autonomous and smart device that does not require any manipulation, except its good fixation and orientation.*

» EXAMPLES OF CONFIGURATIONS

» N°1 : STANDARD RUN WITH LAP TIMES

FREELAP PRODUCTS NEEDED : - 1 **FxChip BLE** transponder / athlete
                                       - 3 **Tx Track Pro** transmitters

START   5m   LAP   FINISH
• Place your **Tx Track Pro coded "START" on the ground on the start line**.
The transmitter has a detection field of 3.5m, it must be placed as follows:
- This transmitter has the shape of an arrow. **Place the transmitter on the side of the track, pointing the front of the arrow toward the track.** The direction of the arrow indicates an imaginary line of passage.
- Place the transmitter **on the side of the track, at less than 3.5m of the athlete's passage** (so that the transponder of the athlete crosses the detection field).
• Then, in the same way, place your **Tx Track Pro coded "LAP" at the desired distance**.
• Finally, place your **Tx Track Pro coded "FINISH" on the finish line**.
• In your MyFreelap workout in data section, you will get your data over the whole tour. Click on it to see the detail of the LAPs and get your data over the first part (L1) and the last part (L2).
• You can add more Tx Track Pro coded «LAP» between the «START» and the «FINISH» transmitters to **get more intermediate times** (11 transmitters on your track max.)
• **Yes, you can time as many athletes as you want, simultaneously.** Just make sure that every athlete crosses the detection field of each transmitter.

_____

» N°2 : SYSTEM IN LOOP

FREELAP PRODUCTS NEEDED : - 1 **FxChip BLE** transponder / athlete
                                       - 1 **Tx Track Pro** transmitter

FINISH

• To get your lap times in a loop system, **only 1 Tx Track Pro transmitter with the code "FINISH" is enough.**
• To take the start, **stay 5 seconds minimum in the transmitter detection field and then start the race.**
• In your MyFreelap workout in data section, you will get your data over the whole tour.
